

# Woven Material

# IBL 3898

## Description:

IBL 3898 is a flexible woven, non-asbestos friction material and is medium brown in colour. The material itself is based on yarns and fibres spun around a brass wire to give excellent frictional stability and provide resistance over the recommended range of temperature.

## Availability

The material is available in the forms of roll, linings, flat sheet and shapes cut from the flat sheet.

## Applications

- Industrial drum and band brakes
- Industrial clutches
- Marine and towing winches
- Miscellaneous industrial friction uses
- Drum brakes on older cars

## Bonding & Mating Surfaces

IBL 3898 can be bonded using any established adhesive recommended for friction material
